

Technology

Technology makes our process speedy and our product spectacular.

When technology can make production more efficient or our product more dazzling, we make the most of it. Here are just some of the state-of-the-art technologies that help us bring you the best.

E-commerce

Our easy-to-use Customer Care Portal allows customers to view and create orders, request quotes, run and download critical reports, check inventory levels, view and download invoices and BOL's, view real-time production data, as well as many other transactions and tasks.

EDI/RFID

EDI technologies allow our system and yours to exchange information effortlessly. Our RFID capabilities allow the tracking of product from manufacturing to the customer's dock.

Barcoded Inventory Tracking systems

You always know where your product is in any of our facilities.

Auto emailed documents

Customers without EDI can receive invoices, quotes, ASN's and acknowledgements automatically via this system.

Custom reports and documents

CaroCon gladly creates any custom report that our customers need in the manner they need it, whether Crystal report, Excel or any other report format. Custom documents such as customized BOL's, unit/load/case labels, or quotations, just to name a few, allow us to serve our customers by formatting our documents to suit their needs.

Project management software

Our proprietary online portal, WebCenter, allows customers to view the status of on-going projects with just a few clicks. You can do everything from checking artwork to granting final approval.

Pallet and packaging optimization software

We use the best in the industry, at every location.

3D Modeling and Animation

We create better designs faster, and present them to you in a way that gives you the best feel for how the finished product will look.

3D Printing

We can produce more models easily using this technology, allowing you to brainstorm ideas and modify them quickly.

Design

Our creative design process combines structural design and graphic design integration with production files, eliminating costly mistakes later in our workflow.

This allows us to streamline the process from creative adaptation to consumer consumption.

Adaptive Design ▪ Photography and Retouch ▪ Production Artwork ▪ Pre-Press

- ⊙ G7 Color Management
- ⊙ Project Management
- ⊙ Digital Asset Management
- ⊙ HD Flexor Plates
- ⊙ Laser Prepped Cutting Dies

Grand Format Digital Production

Replace the litho-lam process of packaging and display quantities under 500 with direct-to-board printing to boost value and reduce cost. (There are no plate or pre-press charges with offset or flexographic printing.)

Color management

Our state-of-the-art color management and matching system ensures precise color on all media.

VMI

Our Vendor Managed Inventory service has saved our clients not only money, but much time and trouble as well.

Sales Force automation software

Our salesmen access all customer data via iPads, tablets, or smart phones. They can review order statuses, specifications, sales, quotes, AR statements, customer activity, etc., all while on-site with the customer.

Real Time Plant Monitoring Systems

This technology allows each of our facilities to track production, waste, quality checkpoints and downtime data as it occurs.
